

Mustaqil ishlash uchun variantlar:

1-variant

1) Quyidagi sonlar C++ tilida yozilsin:

- a) 6,38 b) $\sqrt{2}$ c) 5^6
d) $-24,8 \cdot 10^{-7}$ e) e^x f) [0,66]

2) Quyidagi ifodani C++ tilida yozing:

$$5^2 + \sqrt{36} (3 - 4 : 6)$$

3) Berilgan r radiusli aylana uzunligi, r radiusli doira yuzi va r radiusli sharning xajmini topish dasturini tuzing.

2-variant

1) Quyidagi sonlar qo'zg'almas vergulli ko'rinishda yozing:

- a) $-0.00027E + 4$; b) $666E - 3$ c) $1E1$

2) Quyidagi ifodani C++ tilida yozing:

$$1) \cdot 10^5 + 64)$$

3) Berilgan a, b katetlari bo'yicha to'g'ri burchakli uchburchakning perimetri va yuzasini hisoblash dasturini tuzing.

3-variant

1) C++da $(1/3) * 3 - 1$ qiymati nimaga teng.

2) Quyidagi ifodani C++ tilida yozing:

$$\cos(5) \cdot \operatorname{tg}(8) - \sqrt{\arcsin(6)}$$

3) Teng yonli uchburchakning a, b tomonlari bo'yicha uning perimetri va yuzasini hisoblash dasturini tuzing.

4-variant

1) Ifodalarning qiymatlari hisoblansin:

$$(x + y != 0) \&\& (y > x), \quad \text{agar } x = 2, y = 1;$$

2) Quyidagi ifodani C++ tilida yozing:

$$|x| + [4, 5] - (3 \cdot 10^{-6} + \pi)$$

3) a, b tomonlari va ular orasidagi α burchagi bo'yicha uchburchakning perimetri va yuzasini hisoblash dasturini tuzing.

5-variant

1) Ifodalarning qiymatlari hisoblansin:

$$(x + y != 0) \parallel (y > x), \quad \text{agar } x = 2, y = 1;$$

2) Quyidagi ifodani matematik ko'rinishda yozing:

$$\operatorname{fabs}(x) + \operatorname{atan}(4.5) - (3E-6 + \pi)$$

3) Aylanianing r radiusi bo'yicha unga tashqi va ichki chizilgan uchburchaklar yuzlarini topish dasturini tuzing.

6-variant

1) Ifodalarning qiymatlari xisoblansin:

$a \parallel (\neg b)$, agar $a = \text{false}$, $b = \text{true}$.

2) Quyidagi ifodalar C++ tilida yozilsin:

a) $a + bx + cyz$; b) $|(ax - b)x + c| x - d$; c) $ab : c + c : ab$;

3) To'g'ri burchakli parallelopipedning a, b, c o'lchamlari bo'yicha uning to'la sirti va xajmini xisoblash dasturini tuzing.

7-variant

1) Ayniyatlar isbotlansin:

$a \&\& (\neg a) \equiv \text{false}$; $a \parallel (\neg a) \equiv \text{true}$;

2) Ifodalarning qiymatlari xisoblansin:

a) $\text{ceil}(6.9)$; b) $\text{floor}(6.9)$;

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{a^8 + \text{tg}(ax + b)}{\log_2(ax^2 + b)}$$

$$p = \sin^4(ax + x^2) + e^{3x} \quad \text{bu yerda } a=1.2, \quad v=3.2, \quad x=4.$$

8-variant

1) Ayniyat isbotlansin: $\neg \neg a \equiv a$;

2) Xisoblang:

a) $\text{floor}(6.2)$; b) $\text{ceil}(-1.8)$;

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{e^8 + \cos^4(ax + b)}{\lg(ax^2 + b)}$$

$$p = \ln^4(ax + x^2) + e^{3x} \quad \text{bu yerda } a=1.2, \quad v=3.2, \quad x=6.$$

9-variant

1) Isbotlang: a) false and $a \equiv \text{false}$; b) $a \parallel a \equiv a$.

2) Ifodaning qiymati topilsin:

a) $\text{pow}(x, 2) + \text{pow}(y, 2) < 4$, agar $x = 0.3$, $y = -1.6$;

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{a^{\sin x} + \lg(ax + b)}{\log_3 \sqrt{(ax^7 + b)}}$$

$$p = \cos^2(ax + x)^5 + a^{3x}$$

bu yerda $a=1.2$, $v=3.2$, $x=4.5$

10-variant

1) Xisoblansin:

a) $\text{true} \parallel (10 > 0)$;

b) $(10 < 0) \parallel \text{true}$.

2) Quyidagi shart bajarilganda rost, aks xolda yolg'on qiymat qabul qiluvchi mantiqiy munosabat C++da yozilsin: $ax^2 + bx + c = 0$ tenglama xaqiqiy ildizlarga ega emas.

3)Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{\sqrt[3]{\cos x^{ax+b}}}{\ln^2(a^5 x + b)}$$

$$p = x^{\lg x} + a^{3x}$$

bu yerda $a=1.2$, $v=3.2$, $x=6.7$

11-variant

1) Quyidagi ifodalardagi xatolar tushuntirilsin:

a) $1 \ \&\& \ 0$;

b) $\text{true} + \text{false}$;

c) $\text{true} < 0$;

d) $\neg 2 = 5$;

e) $x > 0 \parallel y = 4$;

2) Quyidagi shart bajarilganda rost, aks xolda yolg'on qiymat qabul qiluvchi mantiqiy munosabat C++da yozilsin: $(x;y)$ nuqta markazi $(1;0)$ nuqtada bo'lgan r radiusli doiraning tashqarisida yotadi.

3)Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{a^x + \sin^3(ax^2 + b)}{\sqrt{\lg(a + \sqrt{x} + b)}}$$

$$p = \cos^2(ax + x) + a^{3x}$$

bu yerda $a=1.2$, $v=3.2$, $x=1.7$.

12-variant

1) Ifodadagi amallar bajarilish tartibi ko'rsatilsin:

a) $a \ \&\& \ b \ \&\& \ \neg c \ \&\& \ d$;

b) $(x \geq 0) \parallel t \ \&\& \ (y * y != 4)$

2) Ifodalarning qiymatlari xisoblansin:

a) $\neg (n > 0)$,

agar $n = 0$;

b) $(x + y != 0) \ \&\& \ (y > x)$,

agar $x = 2$, $y = 1$;

3)Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \sqrt[4]{a} + \ln^2(abx)$$

$$p = \cos^4(ax + x) + a^{3x}$$

bu yerda $a=.2$, $v=3.2$, $x=3$.

13-variant

1) O'zgaruvchilar qiymati $a = \text{true}$ va $b = \text{false}$ bo'lganda quyidagi ifodalar xisoblansin: a) $a \parallel b \ \&\& \ \neg a$; b) $(a \parallel b) \ \&\& \ \neg a$;

2) Ifodalarning qiymatlari xisoblansin:

a) $(x + y \neq 0) \parallel (y > x)$, agar $x = 2$, $y = 1$;

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{4^a + \sqrt{ax^2 + b}}{\lg^3(a^5 + \lg x + b)}$$

$$p = \cos^2(ax + x) + a^{3x}$$

bu yerda $a=1.2$, $v=3.2$, $x=9.2$

14-variant

1) O'zgaruvchilar qiymati $a = \text{true}$ va $b = \text{false}$ bo'lganda quyidagi ifodalar xisoblansin: a) $\neg a \ \&\& \ b$; b) $\neg (a \ \&\& \ b)$.

2) Ifodalarning qiymatlari xisoblansin:

4) $a \parallel (\neg b)$, agar $a = \text{false}$, $b = \text{true}$.

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \sqrt[3]{\frac{a + \sqrt[3]{x^2 + b}}{\lg^2(ax + b)^3}}$$

$$p = \ln^4(ax + x) + e^{3x}$$

bu yerda $a=3.2$, $v=3.2$, $x=6.8$.

15-variant

1) Quyidagi shart bajarilganda rost, aks xolda yolg'on qiymat qabul qiluvchi mantiqiy munosabat C++da yozilsin: $(x;y)$ nuqta markazi $(1;4)$ nuqtada bo'lgan r radiusli doiraning ichida yotadi;

2) Ifodaning qiymati topilsin:

b) $\text{fmod}(k, 7) = k \% 5 - 1$, agar $k = 15$.

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{\sin^5(ax^2 - b)}{\lg^4 \sqrt{(ax + b)}}$$

$$p = a^4 x + \sqrt{a^x}$$

bu yerda $a=1.2$, $v=3.2$, $x=3.6$.

16-variant

1) Quyidagi sonlar C++ tilida yozilsin:

- a) 56,38 b) $\sqrt[3]{45}$ c) 25^4
d) $-124,8 \cdot 10^{-5}$ e) 10^x f) $[0,456]$

2) Quyidagi ifodani C++ tilida yozing:

$$4^{12+\sqrt{49}}(13-5:6)$$

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{a + ax^2 + b}{\lg(a + x)^2}$$

$$p = (\cos(ax + x) + e^x)^2$$

bu yerda $a=1.2$, $v=3.2$, $x=4$.

17-variant

1) Quyidagi sonlar qo'zg'almas vergulli ko'rinishda yozing:

- a) $-0.27E + 3$; b) $6E - 6$ c) $2E3$

2) Quyidagi ifodani C++ tilida yozing:

$$(2 : 5^3 + 64)$$

3) Quyidagi funksiyalarni xisoblashga dastur tuzing:

$$z = \frac{\sqrt[3]{\cos x^{ax+b}}}{\ln^2(a^5 x + b)}$$

$$p = x^{\lg x} + a^{3x}$$

bu yerda $a=1.2$, $v=3.2$, $x=6.7$

18-variant

1) C++da $(1/9) * 3 - 2$ qiymati nimaga teng.

2) Quyidagi ifodani C++ tilida yozing:

$$\sin(5) \cdot \text{ctg}(8) - \sqrt{\arccos(2)}$$

3) Asosining radiusi r , yasovchisi l , yasovchi bila asos radiusi orasidagi burchak 30° bo'lgan konus to'la sirti va hajmini xisoblash dasturini tuzing.

19-variant

1) Ifodalarning qiymatlari xisoblansin:

$(x + y == 0) \&\& (y > 8)$, agar $x = 2, y = 1$;

2) Quyidagi ifodani C++ tilida yozing:

$|x| + [4,5] - (3 \cdot 10^{-6} + \pi)$

3) Asosining radiusi r , asoslarining qarama-qarshi nuqtalarini tutashiruvchi kesma uzunligi x bo'lgan silindr to'la sirti va hajmini xisoblash dasturini tuzing.

20-variant

1) Ifodalarning qiymatlari xisoblansin:

$(x + y != 0) \parallel (y > x)$, agar $x = 2, y = 1$;

2) Quyidagi ifodani matematik ko'rinishda yozing:

$\text{abs}(x) + \text{ceil}(4.5) - (3E-6 + \pi)$

3) Asosi a , yon tomoni b , ular orasidagi burchak 60° bo'lgan teng yonli uchburchak yuzi, perimetri va balandligini xisoblash dasturini tuzing.
